

IN THE CLAIMS

This listing of claims replaces all prior listings:

1. (currently amended) A battery pack housing a plurality of battery cells, the battery pack comprising:

a case having a conductive terminal board respectively connecting positive electrodes and negative electrodes of said plurality of battery cells to outside terminals,

wherein said conductive terminal board has a structure in which a first member is joined with a second member such that said first member having excellent weldability is arrayed in a plurality-of-islands state in said second member having excellent conductivity, the islands of the first member being formed as a common structure such that adjacent islands are connected by a narrow portion that is narrower than the respective island portions.

wherein said first member of said conductive terminal board includes a rectangular slit in at least one island portion of the first member and the positive electrodes and the negative electrodes of said battery cells are welded to said first member of said conductive terminal board through resistance welding, and

wherein said second member having excellent conductivity has a structure in which a projecting portion for connecting a control circuit substrate is provided on one short side of a plate portion having an oblong card shape that is larger than said first member in outer shape thereof, said first member being joined with said plate portion of said second member, a combined thickness of said first member joined with said second member being approximately uniform.

2. (original) A battery pack according to claim 1, wherein

said first member of said conductive terminal board is joined with the second member such that one surface of the first member shows an islands-like shape and the other surface thereof shows a shape that the island portions are connected to each other.

3. (previously presented) A battery pack according to claims 1 or 2, wherein

said first member of said conductive terminal board contains any one of or plural kinds among: nickel (Ni), nickel alloy, iron (Fe), iron alloy, stainless steel, zinc (Zn), zinc alloy, platinum (Pt), platinum alloy; and said second member contains any one of or plural kinds among: copper (Cu), copper alloy, aluminum (Al), aluminum alloy, silver (Ag), silver alloy, gold

(Au), gold alloy, beryllium (Be), beryllium alloy, rhodium (Rh), rhodium alloy, tungsten (W), tungsten alloy, molybdenum (Mo) and molybdenum alloy.

4. (previously presented) A battery pack according to claims 1 or 2, wherein
said first member of said conductive terminal board is provided with slits, and the
positive and negative electrodes of said battery cells are welded through a series-spot-electricity-
welding such that said slits are straddled by electrodes thereof.
